### Key Features Reinvent project delivery on O360 Project Management

#### Project Estimation

Comprehensive estimation cycle that takes into account scope, milestones, resources, budget, and risks, to help your sales team provide a more accurate project execution quote to your customer.

#### Project Execution

Enjoy ease of planning, close collaborations across functions, intelligent monitoring, and real-time tracking for a unified project execution.

#### Project Intelligence & Customization

In-built analytics and interactive dashboards for immediate visualization of critical project details.

#### Resource Deployment

Consider availability of skillsets, prior performances, associated costs, project locations and employee locations before the best resource is deployed.

#### Advanced Project Tools

Organize tasks and critical activities in detail, for on-time project completion using sophisticated estimations tools and automated project trackers

### Project Inventory

Manage inventory availability with one-click orders and automated replenishments.

### Subcontractor Management

Simplify vendor selection, use virtual service initiations for remote onboarding and effortlessly oversee full subcontractor assignment.

### Project Controls

Track ongoing project costs with dynamic financial controls to eliminate manual processing of labor, purchasing, time and financial data.

### Project Costing

Accomplish greater accuracy and standardization with advanced planning, forecasting and cost allocation tools.

### O360 Client Desk

Improve customer service with smart escalations and increased responsiveness to client feedback.

### O360 Vendor Desk

Connect outsourced activities to the project WBS for better collaboration and timely responses to real-time concerns.

### Project Records & Document Repository

Automate your document management system for smart storage, secure retention and ease of records retrieval with adequate transparency.
